Anaheim, CA

Orlando, FL

Custom Cable is a full-service provider for Closed Circuit and CATV systems that send video signals to television monitors in a variety of scenarios—for example, flight status at airports, security and surveillance, and entertainment.

We offer paging systems to communicate audio-only information—for example, telephone paging and ambient music or white noise.

### **Custom Cable advantage**

- Our depth of knowledge in structured cabling and building wiring techniques provides a solid foundation for large-area communications.
- We can design, install, align, troubleshoot and repair most systems.

### **Considerations**

CCTV, CATV and paging systems are subject to the same codes and regulations as any other type of low-voltage cabling. Firms specializing in only the CCTV, CATV and paging application may not be familiar with the requirements for the physical installation of the wire, resulting in electrical and building code violations.
