Design and Consultation

Validate your design assumptions, evaluate alternate components, materials and costs, and reduce your project risk, and in some cases, cost.

At Custom Cable, we work with our clients in a consultative way. We combine your vision with our experience and commitment to excellence—not only configuring and developing the product you desire but managing material requirements, reducing costs of your operations, and boosting your competitive advantage.

We know that cabling solutions can be complex with many possible “correct” solutions. The key to a successful result starts with a design that meets the current requirements, can flex and respond to your changing needs, and supports current and foreseeable future technologies. An effective solution accomplishes all of this while conforming to cost budgets.

Organizations that employ their own installers often ask Custom Cable to consult on the design of their projects.

Custom Cable advantage

- ☑ We know what works and what doesn't. Since 1980, with our experience and expertise, we have encountered numerous challenges and responded with creative, custom solutions.
- ☑ Our technical services team provides detailed CAD services using the latest software, guiding your project through various stages of development, from a single prototype to high-volume production runs.
- ☑ Our consultative style gives you design options. In it, we will scrutinize the designs, looking for potential opportunities to value-engineer alternative solutions that meet the stated design objectives and save you money. With our experience, we can head off potential complications causing costly project delays.
- ☑ Our Registered Communication Distribution Designers (RCDDs) are trained and certified to determine compliance to codes. We can audit an installation, whether it is ours or not, and determine code compliance.

Considerations

At best, mistakes made during the design stage will result in a system that is difficult to use and expand. At worst, design mistakes can result in a system that does not function, as well as building and electrical code violations that may threaten people and property. Custom Cable can handle your job right, the first time.
