

# solution

## Network Foundation

Choose a systems-based solution with everything needed to fully and securely connect your internal organization, along with branch or satellite offices.

Custom Cable can design and engineer a secure network foundation that handles both voice and data communications for your business. With a strong and cohesive network foundation in place, your company needs only purchase and maintain a single set of equipment, and it's easy to add emerging technologies—such as webcasting, voice over IP (VoIP), streaming video, and wireless—to meet customer demands or support growth.

Network foundations include switches, routers, and wireless access points, as well as adaptive security appliances to guard against network threats and provide application security, network control and containment, and secure connectivity technologies.

## Custom Cable advantage

No matter what goals your organization has set, Custom Cable can help you achieve them. We have developed our solutions by working closely with clients and have proven their effectiveness through many installations.

- ☑ With proven expertise in networking infrastructure solutions, Custom Cable can provide a range of value-added services.
- ☑ Our certified and experienced network/system engineers are fully prepared to design, deploy and optimize networking solutions.
- ☑ We are a Cisco Small to Medium Business Select Partner, meeting specific training and market-focused requirements and holding specific technology specializations.

## Considerations

In the past two decades, many applications have become web-enabled, the sales force has become more remote, and the network requirements to support both have dramatically increased. These developments have dramatically boosted productivity and profitability—but have also increased the vulnerability of business assets to internal and external threats. Security breaches, worms and viruses can assail a company from a range of sources, including its own networked computers and servers. For this reason, it is particularly important for small or branch offices with limited information technology resources to have a secure network foundation.
