## Wireless

Increase productivity and flexibility in the office by providing full access to network applications, data, and Internet whenever, wherever.

Custom Cable designs and installs wireless systems, ideal for organizations that thrive on collaboration or mobility—offices with team and project spaces where a laptop or phone may be passed around, warehouses where people are far apart and on-the-go.

Some companies are reporting savings of thousands of dollars per employee per year, lowering this solution's total cost of ownership.

### Custom Cable advantage

We can be your one-stop-shop for the solutions that make wireless access possible. With a single vendor, your project process is streamlined and the results are effective.

- ☑ We determine the appropriate radio frequency (RF), channel and access point locations for your specified applications and coverage needs. We can provide your RF distribution method (number of access points, types of antennas, Wi-Fi switches, etc.). We even offer an RF coverage map.
- ☑ We conduct a performance analysis for optimizing your solution. We're also a troubleshooting resource.
- ☑ We provide network and device management as well as user administration.
- ☑ We provide services for:
  - security strategies, policies and equipment
  - network device management and administration
  - engineering support to help with moves, additions and changes
  - powering strategy

### Considerations

Though the user experience of wireless is no-strings-attached, wireless service works by picking up signals from access points cabled into a network system. That's where Custom Cable comes in.

Wireless solutions are most often used as a complement to our structured zone or home run cabling system.
